

IN THE SPECIFICATION

At page 3, please amend the paragraph beginning at line 17 as follows:

According to one embodiment of the invention, the resilient biasing member is a torsional spring. For example, the resilient biasing member is a torsional spring selected from
5 the group of torsional springs including a torsional coil spring, ~~a torsional coil spring~~, a straight bar spring, and any other conventional torsional spring.

IN THE CLAIMS

1. (Once Amended) A tool bracket, comprising:
a holder structured to engage an elongated portion of a tool;
10 a mounting base joined for relative rotation to the holder; and
a resilient biasing member coupled to each of the holder and the mounting base and
being structured to promote rotation between the holder and the mounting base.
3. (Once Amended) ~~The tool bracket of claim 2 wherein the biasing member is~~
A tool bracket, comprising:
15 a holder structured to engage an elongated portion of a tool;
a mounting base joined for relative rotation to the holder; and
a torsional spring biasing member coupled to each of the holder and the mounting base
and being structured to promote rotation between the holder and the mounting base.
4. (Once Amended) The tool bracket of claim 2-1 wherein the biasing member is a
20 torsional spring selected from the group of torsional springs comprising a torsional coil spring,
~~a torsional coil spring~~, and a straight bar spring.
15. (Once Amended) A bracket for securing a tool having an elongated portion, the
bracket comprising:
a means for attaching to an external structure;
25 a means rotatably coupled to the attaching means for securely engaging an elongated
portion of a tool; and
